House Appropriations Committee Approves and Funds 5% Block Grant Crisis Services Set-Aside for FY 2021, Mandates State Reporting of Healthcare Disparities

A Fiscal Year 2021 funding measure for the departments of Education, Labor and Health and Human Services (HHS) passed by the House Appropriations Committee on July 13 directs the Substance Abuse and Mental Health Services (SAMHSA) to implement a new five percent set-aside in the Mental Health Block Grant (MHBG) for evidence-based crisis care programs addressing the needs of individuals with serious mental illnesses and children with serious mental and emotional disturbances.

In the accompanying Committee Report, the Appropriations Committee directs SAMHSA to use the set-aside to fund, at the discretion of eligible states and territories, some or all of a set of core crisis care elements including: centrally deployed 24/7 mobile crisis units, short-term residential crisis stabilization beds, evidence-based protocols for delivering services to individuals with suicide risk, and regional or state-wide crisis call centers coordinating in real time.

The set-aside would be funded by $35 million of the $96 million increase in SAMHSA funding over FY 2020, $83 million of which is designated for mental health programs.

The bill, which passed on a party-line vote of 30-22, would boost HHS’ budget by $1.5 billion over FY 2020, for a total of $96.4 billion. It also includes an additional $24.425 billion in emergency spending for state and local public health departments and public health laboratories.

The measure would also direct states to include in their MHBG reporting to SAMHSA, with the goal of unearthing healthcare disparities in mental health, services provided to individuals from racial and ethnic minorities, including the extent to which those services are provided to individuals from racial and ethnic minorities and the outcomes experienced as a result. Impact and outcomes would have to be reported for racial and ethnic minority adultswith serious mental illness and racial and ethnic minority children with serious emotional disturbance in reports of data submitted relating to:

- systems of care,
- diversions from hospitalization and criminal justice system involvement,
- treatment for first episode psychosis,
- reductions in suicide and treatment for suicidal ideation,
- response through crisis services, and
- treatment of homeless individuals and individuals residing in rural communities.

State Mental Health Agencies also would be required to report on outreach to, and the hiring of, racial and ethnic minority providers of mental health services.

The Appropriations Committee also includes a $5 million increase to $21.2 million for the Zero Suicide model and an increase of $2 million to $21 million for the Suicide Lifeline. Saying it is concerned by recent data from CDC and the National Survey on Drug Use and Health indicating a significant rise in youth suicide reported over the last decade, the Committee encourages SAMHSA, in consultation with the U.S. Department of Education, to develop a standard for providing all school-based teachers and nurses with suicide prevention training to treat mental health challenges experienced by younger Americans.

The Committee previously urged SAMHSA to provide specific training programs for Suicide Lifeline counselors to increase competency in serving LGBTQ youth through the utilization of existing specialized resources. The Committee also urged SAMHSA to consider the diversion of calls to specialty partners who are best situated to serve the LGBTQ community. As the Lifeline continues to anticipate higher call volume, both due to mental health stresses caused by COVID–19 and the transition to a three digit code, the Committee says it is now more important than ever that SAMHSA work to implement LGBTQ competency training for counselors and an Integrated Voice Response option for LGBTQ youth callers.

The Committee proposes to increase from $200 million to $225 million the moneys appropriated for grants to certified community behavioral health centers. This is in addition to the CARES Act appropriation for CCBHC grants of $250 million.

The Committee includes an increase of $2 million, to $22 million, for tribal behavioral health grants to address the high incidence of substance abuse and suicide among American Indian/Alaska Native populations. It also increases by $5 million, to $107 million, the appropriation for Project Aware, which is designed to identify children and youth in need of mental health services, to increase access to mental health treatment, and promote mental health literacy among teachers and school personnel and adds $1 million to the Mental Health Minority Fellowship Program, bringing the total for that program to $10,059,000. (Continued page 3)

FCC Unanimously Approves Designation of 988 for Suicide Prevention Lifeline

The Federal Communications Commissioner unanimously voted July 16 to approve the designation of the 988 dialing code for the Suicide Prevention Lifeline, requiring, telecom companies to implement the code by July 16, 2022. Trade group U.S. Telecom said the deadline would be hard to meet, suggesting the complexity of making numerous switch translations could require future waivers.

House Appropriations Committee Approves and Funds 5% Block Grant Crisis Services Set-Aside for FY 2021, Mandates State Reporting of Healthcare Disparities
(Continued from page 1) To improve primary and behavioral health integration, the Committee includes an increase of $5 million to fund a PCBI learning collaborative for interested health care systems on effective integration of nationally certified peer support specialists, with an emphasis on health care systems in alternative payment models. The increase brings the total for the integration program to $54,877,000.

The Committee proposes a $10 million increase for substance abuse treatment, bringing total funding for that purpose to $3,847,756,000. That includes an increase in grants to Indian tribes, tribal organizations, or consortia of $2 million.

Funding for treatment once again includes $1.5 billion for State Opioid Response Grants. The Committee also includes $3 million for supplemental grants to states whose award from the State Opioid Response formula grant declined by more than 40 percent in FY 2020 from FY 2019. The Committee directs SAMHSA to allocate the funds to eligible states within 30 days of enactment of the funding measure.

The Substance Abuse and Treatment Block Grants would be funded at the FY 2020 level of $1,858,079,000.

Noting that substance use disorders, including opioid use, typically begin in adolescence, and that preventing underage drinking and other early substance use is a cost-effective strategy in preventing costly problems later in life, the Committee states that Screening, Brief Intervention and Referral to Treatment (SBIRT) has been shown to be a cost-effective model for reducing and preventing underage drinking and other substance abuse. It therefore directs that $2 million of the $30 million appropriated for the SBIRT program go to pediatric providers, many of whom, it says, have not been trained to use the SBIRT model effectively.

Funding for Building Communities of Recovery, a program which enhances long-term recovery support services provided by people in recovery from substance use disorders is increased by $2 million to $10 million.

Substance Abuse Prevention would be increased by $3 million, to $209,469,000. The Committee also includes an increase of $2 million to expand efforts to address the high incidence of substance abuse and suicide among American Indian/Alaska Native populations.

Under funding for the Centers for Medicare and Medicaid Services (CMS), the Committee notes a lack of proper oversight of compliance by insurance companies in meeting Federal parity requirements, 11 years after enactment of the Federal parity law.

The Committee urges the CMS Administrator to create guidelines, in which all states or, where appropriate, Medicaid Managed Care Organizations are required to submit a public report on compliance with the application of parity in imposing non-quantitative treatment limitations. The Committee urges CMS to annually issue a public compliance report based on the agency’s 2017 Parity Compliance Toolkit.
Study Finds Suicide Rate for Individuals Diagnosed with Schizophrenia Spectrum Disorder is 170 Times the Suicide Rate for the General Population

The overall rate of suicide among people with a diagnosis of schizophrenia spectrum disorder was 170 times higher than the general population, according to findings published June 2 in Schizophrenia Research.

Lead author Juveria Zaheer, MD, Health Outcomes and Performance Evaluation Research Unit, Institute for Mental Health Policy Research, Center for Addiction and Mental Health, Canada, and colleagues studied records from the administrative health databases in Ontario, Canada of individuals 16 to 45 who had received a diagnosis of schizophrenia spectrum disorders (SSD)—schizophrenia, schizoaffective disorder, and psychotic disorder not otherwise specified (NOS). Health records with a SSD diagnosis were examined from January 1, 1993 to December 31, 2012. A total of 75,989 patients (60 percent male, 40 percent female) were tracked for almost a decade to examine cause of mortality.

The investigators found that the overall suicide rate was 1.71 percent or 171 per 100,000 people after an average of 4.32 years, while the suicide rate for the general population is 1 per 10,000. Overall, one out of every 58 study participants died by suicide after a SSD diagnosis. Several predictive factors were associated with the suicide death among the SSD cohort, including being male; a diagnosis of SSD between the ages of 26 to 35 or 36 to 45 in comparison to the age group 16 to 25; prior suicide attempt before a SSD diagnosis; and evidence of a mood disorder or psychiatric hospitalization in the two years prior to a SSD diagnosis.

In a Center for Addiction and Mental Health press release, Dr. Zaheer commented, “What this study teaches us is that although people with schizophrenia spectrum disorders are at higher risk for suicide, we can target those at the highest risk with changes in policy and treatment.”

The authors conclude that treatment of SSD must include suicide prevention safety planning at the onset of diagnosis to change the trajectory of suicide rates among people with SSD. One treatment recommendation would be integrating the predictive factors into the suicide risk assessment. In addition, they suggest increasing the duration of clinical follow-up care after a first-episode psychosis. From a policy perspective, they recommend expanding the age limit for admission to first episode psychosis programs beyond the age of 30 because the cut-off age is usually 30.

Zaheer and colleagues stated that further research is needed to examine why the suicide rate is tragically higher for this subset population. To better understand why, they suggest studying the lived experience of people with SSD who have experienced suicidal behaviors.

---

Suicide Prevention Resource Center On-Line Course:
Locating and Understanding Data for Suicide Prevention

Effectively preventing suicide requires an understanding of who is attempting and dying by suicide, where the problem is most severe, and under what circumstances attempts and suicide deaths occur. But how do you find the data you need to answer these questions and others? Locating and Understanding Data for Suicide Prevention presents a variety of data sources that are useful for finding information about suicide deaths, suicide attempts, and suicidal ideation. This course also explains key concepts that will help you better understand the data you find.

After completing this course, attendees will be able to:

- Define and understand the difference between suicide deaths, suicide attempts, suicide ideation, and risk and protective factors for suicide;
- Explain key terms essential to accurately interpreting data and making meaningful comparisons;
- Identify commonly used and readily accessible online national data sources, and the type of data that is available from each source.
- Identify alternative data sources that may be available in states and communities, the type of data available from these sources, and considerations when approaching organizations and agencies for these data.
- Think critically about the strengths and limitations of a given data source.

This course is open to anyone. We highly recommend it for any professional involved in national, state or community suicide prevention.

Course Length: This course can be completed in approximately two hours. You do not have to complete the course in one session. You can exit the course at any time and return later to the place where you left off.

Certificate of Completion: To receive a certificate of completion, you must do the following online: complete each lesson, pass the posttest (passing score is 80 percent or higher), and answer the feedback survey questions. You can earn a certificate of completion once per year for each course. We do not offer continuing education credits for any of our courses.

How #CrisisTalk is Transforming Dialogue in Behavioral Health

The National Association of State Mental Health Program Directors (NASMHPD) and its Crisis Now partners—the National Suicide Prevention Lifeline and Vibrant Emotional Health, the National Action Alliance for Suicide Prevention, the National Council for Behavioral Health, and R.I. International—have launched the #CrisisTalk website, sparking much-needed dialogue on behavioral health crises. The new publication provides a platform for diverse experts and people with Lived Experience to exchange thoughts, knowledge, and innovations. Each article shares a person’s perspective, whether that’s an emergency department doctor who tells her story, revealing the challenges emergency physicians experience when faced with a patient in crisis, or a student with suicidal ideation and his university choosing legal self-protection over doing what was best for him.

The objective is to facilitate conversations about mental health crises, including missed opportunities, gaps, tools, and best practices. #CrisisTalk is sharing the diverse stories of people affected by behavioral health crises, including those who have experienced one, loved ones, and stakeholders who need to be part of the conversation, swinging the pendulum worldwide toward awareness and change.

#CrisisTalk interviews reflect the perspectives of mental health experts and first responders. They point out common misconceptions and challenges in their fields and the communities they serve. This includes why some locations do not develop a full continuum of crisis care services. The discussions transcend geography and illustrate ways to make positive changes in the crisis space. Simply having a conversation with a person in crisis, a non-judgmental, empathic approach, along with a willingness to listen and sit with someone, can go a long way.

#CrisisTalk is part of CrisisNow.com, a roadmap to safe, effective crisis care that diverts people in distress from the emergency department and jail by developing a continuum of crisis care services that match clinical needs to care. To learn more, visit www.CrisisNow.com/talk.

### THIS WEEK: BEHAVIORAL HEALTH LINK’S MEGAN GLEASON ON PARTNERING WITH THE FBI TO BETTER SERVE PEOPLE IN CRISIS

When people think of the FBI, they imagine what they see in films: tropes of action-packed espionage and FBI agents chasing down serial killers. Megan Gleason just completed the FBI Citizens Academy and says that some of what we see in movies isn’t that far off. The FBI is a lot bigger than I thought. We were able to meet with specialists who gave detailed, elaborate presentations on domestic and international terrorism, the dark web, and espionage. Perhaps not surprising since she’s a licensed social worker, Gleason was particularly intrigued by a segment that illustrated how easily people can be manipulated. It’s a window into what the agency does. Some of the information is enough to make a person paranoid, she laughs. What most impressed her, though, was the ethos behind the academy, highlighting the FBI’s desire to develop relationships within the community. They are directly sharing with us that they need our help and insights. It goes against that insular image most of us have of the FBI.

Gleason is the metro Atlanta regional manager for the Behavioral Health Link (BHL) blended mobile crisis program, a 24-hour response service that covers the vast majority of Georgia counties. Her team, made up of 70 plus employees, responds to anyone in psychiatric or medical distress. We go in to have a conversation with the person and determine the best level of care they need, diverting them from jail and the emergency room. She says accessing any mental health crisis system is complicated and becomes particularly daunting for a person in active crisis and their family. Since its inception, BHL has partnered with emergency medical services and local and federal law enforcement on de-escalation and trauma informed care to give first responders a better understanding of behavioral health crises.

Crisis Now Partners:

The National Association of State Mental Health Program Directors (NASMHPD), founded in 1959 and based in Alexandria, VA, represents the $41 billion public mental health service delivery system serving 7.5 million people annually in all 50 states, 4 territories, and the District of Columbia. NASMHPD (pronounced “NASH-bid”) is the only national association to represent state mental health commissioners/directors and their agencies, and serves as the lead for www.CrisisNow.com.

The National Suicide Prevention Lifeline and Vibrant Emotional Health provides free and confidential emotional support and crisis counseling to people in suicidal crisis or emotional distress 24 hours a day, 7 days a week, across the United States. Funded by the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA) and administered by Vibrant Emotional Health, the Lifeline engages in innovative public messaging, development of best practices in mental health, creative partnerships, and more to improve crisis services and advance suicide prevention for all. www.suicidepreventionlifeline.org | www.vibrant.org | www.twitter.com/800273TALK

The National Action Alliance for Suicide Prevention is the public-private partnership working with more than 250 national partners advancing the National Strategy for Suicide Prevention with the vision of a nation free from the tragic experience of suicide and a goal of reducing the annual suicide rate 20 percent by 2025. Administered by EDC, Inc., the Action Alliance was the catalyst for the Zero Suicide Healthcare and Crisis w: Transforming Services innovations. www.theactionalliance.org | www.edc.org | www.twitter.com/Action_Alliance

The National Council for Behavioral Health is the unifying voice of America’s health care organizations that deliver mental health and addictions treatment and services. Together with their 3,000 member organizations serving over 10 million adults, children and families living with mental illnesses and addictions, the National Council is committed to all Americans having access to comprehensive, high-quality care that affords every opportunity for recovery. The National Council introduced Mental Health First Aid USA and have trained more than 1.5 million Americans. www.thenationalcouncil.org | www.mentalhealthfirstaid.org | www.twitter.com/NationalCouncil

RI International (d/b/a for Recovery Innovations, Inc.) is a global organization that offers more than 50 programs throughout the United States and abroad, characterized by recovery and a focus on what’s strong, not what’s wrong. More than 50% of employees report a lived experience with mental health, and the “Fusion Model” crisis stabilization programs are featured in Crisis Now. The Company also provides training and consulting internationally and supports Zero Suicide International, a partnership with Behavioral Health Link. www.riinternational.com | www.zerosuicide.org | www.twitter.com/RI_International
Areas of interest include, but are not limited to:

- Ensure that the proposed technologies address an unmet need or substantially enhance existing capabilities.
- Potential applicants seeking to develop technologies for remote monitoring or treatment delivery should have performed sufficient due diligence that address more long-standing barriers to SUD treatments or tackle issues with predominately in-person clinical trials research.
- We will also prioritize applications that have an impact beyond the circumstances created by the COVID-19 pandemic, for example, applications that address more long-standing barriers to SUD treatments or tackle issues with predominately in-person clinical trials research.

Background

Most mainstream treatments for SUD currently rely on in-person clinical visits as an essential setting for treatment delivery and outcomes monitoring. The advent of the COVID-19 pandemic has substantially disrupted in-person treatment delivery, demonstrating the limitations of relying on in-person approaches. Further, even during normal circumstances, in-person treatment delivery results in additional travel-related demands and schedule conflicts (e.g., work, childcare) that can be burdensome to patients. These issues may be addressed via remote treatment delivery and patient outcomes monitoring as exemplified by telemedicine. Few studies have demonstrated that remote delivery of SUD treatment is feasible, safe, and efficacious. These remote delivery methods are generally still in the early stages of development, and existing studies generally lack the scope required to inform dissemination into clinical practice. Therefore, there is a need to develop new remotely-delivered SUD treatments and expand the dissemination of those already evaluated.

Similarly, clinical trials of SUD interventions generally require frequent in-person contact to monitor tolerability, adherence, and efficacy outcomes. The COVID-19 pandemic halted most SUD clinical research, which is evidence that methods for conducting clinical trials remotely are needed to overcome these challenges when participants cannot attend in-person clinic visits. Thus, there is an urgent need of research to develop tools to reduce the frequency of in-person visits in SUD clinical trials.

We expect this NOSI to accelerate the development of (1) remotely-delivered SUD treatment interventions, and (2) remote methods for collecting outcome measures evaluating the safety and efficacy of SUD treatments. These advances will facilitate the delivery of effective treatments to those in need and permit the execution of clinical trials when physical access to clinical research sites is limited. Ultimately, both these advances will lead to improved treatment options for individuals with SUD.

Research Objectives

NIDA encourages the submission of applications that will rapidly improve the ability to: (1) offer remotely-delivered SUD treatments to patients, including efforts to bring access to difficult to reach populations, and (2) conduct clinical trials of novel treatments using remote patient safety and clinical outcomes monitoring to reduce the need for in-person clinical visits.

This NOSI encourages research among subgroups that have been disproportionately impacted by COVID-19 or have difficulty accessing SUD treatment/research programs, including racial/ethnic minorities, socioeconomically disadvantaged individuals, and rural populations. This NOSI will also prioritize applications that have an impact beyond the circumstances created by the COVID-19 pandemic, for example, applications that address more long-standing barriers to SUD treatments or tackle issues with predominately in-person clinical trials research.

Potential applicants seeking to develop technologies for remote monitoring or treatment delivery should have performed sufficient due diligence to ensure that the proposed technologies address an unmet need or substantially enhance existing capabilities.

Areas of interest include, but are not limited to:

- Development and evaluation of new or existing remote-delivery of treatments for SUD.
- Development and evaluation of new or existing remote-delivery interventions for SUD among patients with or at risk of limitations of mobility, such as:
  - Pregnant or recently postpartum women
  - Older adults
  - Low SES populations
  - Racial/Ethnic minority, or health disparity populations
  - Rural populations
  - Individuals living in Native-American nations
  - Comorbid medical or mental health conditions
- Development and evaluation of new or existing tools and methods for remote monitoring of SUD treatment recruitment, adherence, tolerability, and outcome measures.
- Development and evaluation of research designs that may enhance the implementation of clinical trials that can be conducted remotely, in full or partially, and reduce the number and frequency of in-person clinical visits. These may include recruitment from a larger geographical area, or of patients who live in more rural areas, have disabilities, or have other specific barriers/challenges regarding attending in-person clinical visits (e.g., work during clinic hours, lack childcare, etc.).

Scientific/Research Contact: Evan S. Hermann, PhD. National Institute on Drug Abuse (NIDA), Email: evan.herrmann@nih.gov
Engagement in Mental Health Treatment Among Young Adults

Tuesday, July 21, 2:00 p.m. to 3:30 p.m. E.T.

Successfully engaging young adults in treatment is among the many challenges confronted by Coordinated Specialty Care programs. Discontinuation of services or failure to fully participate in care can result from poor engagement and can result in compromised clinical and functional status.

Dr. Michelle R. Munson from New York University has systematically studied the engagement process among economically and socially marginalized young adults for over fifteen years using both qualitative and quantitative methods. Based on her work and that of her colleagues, she has developed systematic engagement methodologies – including strategies that are youth-informed and centered, and have shown promise in empirical studies.

Dr. Munson embeds these engagement strategies in intervention programs she is testing in the public mental health system. These programs include a strong mentoring relationship provided by an individual with lived experience and they include content to address issues of acceptance, motivation, stigma, hope, mental health literacy, and a need to maintain connection to others while receiving care. Their approaches also include a foundational emphasis on building trust and promoting self-efficacy, and learning how to do this over time in partnership with professional mental health providers.

In this webinar, Dr. Munson will present the formative data that led to the young adult engagement program, and data collected during the development of the program. She will share initial insights that have been gleaned from a randomized clinical trial that is underway in New York. She will be joined by Iruma Bello, Ph.D. and Aanchal Katyal, LMSW from first episode programs who will discuss the applicability of these approaches for engaging youth in Coordinated Specialty Care.

Presenters:

• Michelle Munson, Ph.D. L.M.S.W., Professor at NYU Silver School of Social Work and Director of NYU Silver’s Youth & Young Adult Mental Health Group

• Iruma Bello, Ph.D., Clinical Training Director of OnTrackNY and Assistant Professor of Psychology in Psychiatry at the Columbia University Vagelos College of Physicians and Surgeons

• Aanchal Katyal, L.M.S.W., New York State Personalized Recovery Oriented Services (PROS)

Best Practices in Navigating HIPAA and 42 CFR Part 2: A Client, Family and Organizational Perspective

Thursday, July 30, 2:00 p.m. to 3:30 p.m. E.T.

Understanding HIPAA the substance use disorder confidentiality regulations (42 CFR Part 2) can be confusing for individuals and families who are new to mental health/substance use disorders (SUDs). Individuals and families have better success at recovery if their support systems can stay involved in ongoing care and engage in shared decision making as part of treatment for mental illnesses and SUDs.

This webinar will explore what people need to know about HIPAA and 42 CFR Part 2 from a client, family, and organizational perspective. Our speaker will provide easy to understand overview of the law. Learn practical tips to ensure all parties who can and want to be involved in treatment are involved from the beginning. The webinar will finish with policy and practice guidelines for organizations and programs to successfully implement HIPAA and 42 CFR Part 2. Guidance will include protocol for data collection, data sharing strategies, and supporting clients and families.

Presenter: Gerald (Jud) E. DeLoss, JD – Chief Executive Officer/General Counsel, Illinois Association for Behavioral Health

Closed-captioning is available for these webinars. We do not offer CEU credits. However letters of attendance are offered upon request.

If you have any questions please contact Kelle Masten via email or at 703-682-5187.
An Important Grant Award Announcement

SAMHSA's First National Family Support Technical Assistance Center (NFSTAC)

A coalition led by the National Federation of Families for Children's Mental Health, in partnership with the Center on Addiction, C4 Innovations, SAFE Project, and Boston University has been awarded SAMHSA's first National Family Support Technical Assistance Center (NFSTAC). NFSTAC is committed to providing tiered training and technical assistance (TTA), using a lifespan approach, that focuses on supports for families caring for loved ones who experience serious emotional disturbances, serious mental illness, and substance use disorders. This approach is anchored by the underlying principles that families play a vital role in supporting their loved ones, are the experts regarding their family support needs, and can be productively engaged to play a central role in treatment and recovery services.

NFSTAC will deliver comprehensive TTA that:

- Advances partnerships between clinical and peer providers and family members of individuals experiencing SED/SMI/SUDs
- Promotes stronger and more sustainable recovery-oriented outcomes
- Focuses on adapting and implementing recovery-oriented services
- Targets emphasis on workforce capacity and competencies
- Trains and certifies family peer specialists
- Delivers field-requested and on-demand resources for families and the general public
- Offers a multimodal platform including virtual trainings, mobile apps and social media

The NFSTAC team is comprised primarily of family members with loved ones of varying ages who experience SED/SMI/SUDs as well as individuals in recovery. This lived experience, combined with collective decades of experience as researchers, practitioners, TTA providers, and leaders in family engagement, will inform every aspect of NFSTAC. The effect of entrusting this agenda to a family-run organization, in collaboration with local, state and national family-centered partners, and strong alignment with professionals who advance the importance of family engagement in their work, will be transformational in the delivery of TTA. It will also emphasize to all stakeholders that lived experience and authentic family voice are cornerstones of the NFSTAC approach.

For more information, please contact Lynda Gargan, Executive Director, at lgargan@nffcmh.org.

NFFCMH | 15800 Crabbs Branch Way Suite 300, Rockville, MD 20855
Webinar Series: Implementing the Principles of a Trauma Responsive Service System

REGISTER FOR SERIES HERE

The SAMHSA Concept Paper on Implementing a Trauma Informed Approach will provide the basis for this four-part series designed to create a values-based framework for moving from theory to practice. The six principles for creating a trauma responsive service delivery will be presented. Organizations that serve victims of crime and those that have used their services will lend their voices and their experiences to share how they used the principles in creating trauma responsive services. Discussions on the importance of recognizing and addressing unconscious or implicit bias and its impact on services will also be discussed. The principles serve as a non-prescriptive road map to assist with the implementation of trauma responsive services and creating an atmosphere where all victims of crime want to come for help/services.

The opinions, findings, and conclusions or recommendations expressed in this product are those of the contributors and do not necessarily represent the official position or policies of the U.S. Department of Justice.
COVID-19 Response: Promising Practices in Health Equity

Wednesday, July 29, 3:00 p.m.- 4:00 p.m. ET

Please join us for another webinar focused on sharing promising public health practices to reduce COVID-19 related disparities. During this webinar, presenters will discuss actions taken to mitigate the disproportionate impact of COVID-19 on racial and ethnic minorities. Additionally, speakers will take these ideas a step further and examine how they can be integrated into longer-term strategies for lasting impact that will strengthen future responses and advance health equity. Please feel free to share this announcement with others who might be interested.

Moderator: Dr. Leandris Liburd, Director of the Office of Minority Health and Health Equity/Chief Health Equity Officer of the CDC COVID-19 Response, Centers for Disease Control and Prevention

Speakers:

- Dr. Aletha Maybank, Chief Health Equity Officer, GVP, American Medical Association
- Mr. David Saunders, Office of Health Equity Director, Pennsylvania Department of Health
- Mr. James E. Bloyd, MPH, Regional Health Officer, Cook County Department of Public Health

Attendees are welcome to submit questions in advance to ecevent357@cdc.gov

Questions or Problems

Registration: Register in advance for this webinar through Zoom.

Virtual Training Program for Peers on Trauma Informed Peer Support

August 4 & 5, Full Day Training Noon to-6:00 p.m. E.T.

Register for August 4 Class  
Register for August 5 Class

*Only need to register for 1 class. Attendees are encouraged to use web cam for this training*

This full day virtual training is designed for peers who will provide outreach and support to underserved victims and interested organizations. Peer trainers will train other peers using the Trauma Informed Peer Support (TIPS) curriculum. It will also include coaching and information sharing by peer trainers who have a variety of experiences having worked in multiple systems and settings. The training will accommodate 15 participants via zoom per session.

Learning Objectives

Upon completion of the training, participants will be able to:

1) Define “peer support” and describe three principles of peer support that differentiate it from traditional professional approaches to services.

2) Describe three characteristics of peer support that contribute to the development of healing relationships among trauma survivors. Including how peer support can it be used in context of traditional victim service agencies and allied professions. (Domestic Violence, Rape Crisis, Human Trafficking, Substance Abuse and other Mental Health settings).

3) Describe three actions peer supporters can take within your organization to avoid “helping that hurts.”

4) Understand what policies and procedures should be in place within an organization to successfully implement a “trauma-informed” peer support program or service.

5) Discuss how understanding trauma survivors’ reactions as “coping strategies” rather than “symptoms” affects the healing potential of peer support relationships.

6) Explain how understanding that people have membership in multiple cultural groups can be helpful in establishing peer support relationships and supporting recovery.

7) Describe how trauma survivors’ personal narratives can be used to explore the meaning survivors make of their trauma experience and how these narratives can be used for healing and growth.

8) List three possible social action activities that trauma survivors can take in your community to reclaim power in their lives.
Notice of Upcoming Targeted PCORI Funding Announcement
Suicide Prevention: Brief Interventions for Youth -- Cycle 3 2020

Announcement Type: Research Award  
Letter of Intent Deadline: September 29, 2020, 5 p.m. E.T.
Total Funds Available: $30 Million  
Total Direct Costs: $10 million
Maximum Project Period: 5 years  
Earliest Start Date: November 2021
Applicant Town Hall Session: September 2020  
Application Deadline: January 12, 2021, 5 p.m. E.T.

This notice provides information about an upcoming Targeted Patient-Centered Outcomes Research Institute (PCORI) Funding Announcement (PFA), which will be released by PCORI on September 1, 2020. Through this initiative, PCORI seeks to fund large randomized controlled trials (RCTs) and/or observational studies that compare the effect of brief interventions on acute suicide risk in youth ages 15 to 24.

Suicide rates in the US have increased by over 35 percent from 1999 to 2018. Of notable concern is the 46 percent increase in rates for youth ages 15 to 24 during this same time period (from 9.9 to 14.5 per 100,000). While suicide rates have risen across race/ethnicity, gender, and geographical groups, rates remain highest in boys/males, LGBTQ, rural, and American Indian/Alaska Native populations. Additionally, recent trends indicate an increasing suicide rate for Black and Latina adolescents.

Brief interventions (e.g., Teachable Moment Brief Intervention, Motivational Interviewing, Safety Planning) are often the first intervention patients presenting with suicidality receive. These interventions are designed to reduce acute suicide risk and direct patients to appropriate treatment, and can be delivered in a variety of settings (e.g., emergency departments, primary care, schools, mobile crisis units, community-based settings, home, inpatient care, juvenile detention centers) and by a range of healthcare professionals. The evidence base of brief interventions for suicidality comes primarily from studies done with adults. There is some evidence for youth, but which interventions work best for which populations of youth is not clear.

This Targeted PCORI Funding Announcement will solicit applications that respond to the following question:
What is the comparative effectiveness of different brief interventions to reduce suicidality and improve outcomes for youth ages 15 to 24?

PCORI is particularly interested in the comparative effectiveness of tailored approaches to brief interventions. Tailoring may include involvement of people with lived experience, telehealth (e.g., apps, text-based, web-based, phone calls, video calls), cultural factors (e.g., language, family involvement, rituals), and specific settings (e.g., primary care, school, home, community) or other cultural adaptations.

Applicants should consider the following outcomes: suicidal ideation, self-harm, engagement in mental health care, functional measures, school participation, employment, skills to manage suicidality, connectedness, quality of life, and healthcare utilization (hospital or ED use). Applications should include follow-up for up to one year.

Interventions must be evidence-based and/or in widespread use and reproducible. This Targeted PFA preannouncement is provided to allow potential applicants additional time to identify collaborators, obtain stakeholder input on potential studies, and develop responsive, high-quality proposals.
An infodemic cannot be eliminated, but it can be managed. To respond effectively to infodemics, WHO calls for adaptation, development, validation and evaluation of new evidence-based measures and practices to prevent, detect and respond to mis- and disinformation.

1st WHO Infodemiology Conference takes place from 29 June to 21 July 2020. The conference consists of 1 pre-conference event, 1 science conference session and 1 public webinar.

In the pre-conference experts engage with the public with 7 inspiring talks how the infodemic affects the world currently and reflections how it can be managed.

The scientific conference from 30 June to 16 July will be a closed session focused on defining the scientific discipline of infodemiology and establish a community of practice and research. The results of the closed session will be reported back to the public in a Public Summary on 21 July 2020.

Objectives

- Understand the multidisciplinary nature of infodemic management;
- Identify current examples and tools to understand, measure and control infodemics;
- Build a public health research agenda to direct focus and investment in this emerging scientific field; and
- Establish a community of practice and research.

Participants

- Experts from the fields of Epidemiology and Public Health; Applied Math and Data Science; Digital Health and Technology Applications; Social & Behavioral Science; Media Studies & Journalism; Marketing, UX and Design; Risk Communication and Community Engagement; Ethics and Governance and other relevant scientific disciplines and practices
- UN agencies
- Public health authorities

Register Here for the Outcomes ZOOM Webinar

After registering, you will receive a confirmation e-mail containing information about joining the webinar.

The Georgia COVID-19 Emotional Support Line provides free and confidential assistance to callers needing emotional support or resources information as a result of the COVID-19 pandemic. The Emotional Support Line is staffed by volunteers, including mental health professionals and others who have received training in crisis counseling. Hours of operation: 8 am - 11 pm. Call 866.399.8938
The Department of Behavioral Health and Developmental Disabilities and the Department of Public Health invite you to participate in our 2x2 Series: Self-Care Tips and Support for Managing Life. These engaging and interactive sessions may be just the break you need from a challenging workday. They are designed to promote wellness and provide self-care tips and support for managing life during these unprecedented times. Each session offers mental health tips and information about reducing/managing stress, working through grief, improving work/life balance, enhancing personal and professional relationships, having fun, and other hot topics.

**NOTE:** The sessions use the WebEx webinar online conferencing system. WebEx allows participants to log on to a website from their computer and view the facilitator's information online, while listening to the facilitator through the use of a simultaneous telephone conference call.

The 2x2 Series is held LIVE twice weekly, on Tuesdays and Thursdays at 2:00 p.m. Below is the date, time, session title and registration link for this week’s sessions (the password for each session is “2by2”):

- **Tuesday, July 14, 2020  2:00 to 2:30 p.m.:** 2x2 Series: Tell Me What You Want: What To Do When Assertiveness Doesn't Come Naturally- Attendee Link
- **Thursday, July 16, 2020  2:00 to 2:30 p.m.:** 2x2 Series: Adulting is Hard, But Here We Are, Killing It: Attendee Link

All participants must use the links above to register for the 2x2 sessions. Additionally, please note that it is strongly encouraged that you join the webinar 10-15 minutes prior to the start time to ensure that you do not experience any connectivity issues. Although all attendees will be muted, the chat box will be functional, and all attendees are encouraged to ask questions and share thoughts through the interactive chat. The facilitator will allot time for Q&A at the end of the presentation.

**Want to be a 2x2 Presenter?** The 2x2 Planning Team is recruiting new presenters to share their knowledge and experience with our growing audience. If you are interested, please click on the following link, and complete the Speaker Application. A member of our team will contact you to begin the vetting process.  [https://www.surveymonkey.com/r/2x2_Series_Speaker_Application](https://www.surveymonkey.com/r/2x2_Series_Speaker_Application)

If you cannot attend the live sessions, each one will be recorded and available for review on the DBHDD website: [https://dbhdd.georgia.gov/2x2-series](https://dbhdd.georgia.gov/2x2-series).

**Questions?** Please email DBHDDLearning@dbhdd.ga.gov

**The MHTTC Network – School Mental Health Initiative**

The Mental Health Technology Transfer Center (MHTTC) Network, funded by the Substance Abuse and Mental Health Services Administration (SAMHSA), is a collaborative Network that supports resource development and dissemination, training and technical assistance, and workforce development for the mental health field. The Network includes 10 Regional Centers, a National American Indian & Alaska Native Center, a National Hispanic & Latino Center, and a Network Coordinating Office.

The MHTTC Network has supplemental funding to focus on the need for further implementation of mental health services in school systems. The Regional and National Centers provide technical assistance and develop resources, trainings and events around various school mental health topic areas, including evidence-based identification, early intervention, and treatment practices, youth suicide prevention, school wellness, and trauma-informed practices in schools.

During the current COVID-19 public health crisis, the MHTTC Network remains open and available to assist the school mental health workforce. While in-person learning opportunities are postponed until further notice, the Network is working quickly to offer virtual learning opportunities in the interim.

To view a compilation of MHTTC resources specific to school mental health during the COVID-19 pandemic, please visit our [website](https://www.surveymonkey.com/r/2x2_Series_Speaker_Application). For access to all MHTTC trainings and resources, visit the Training and Events Calendar [here](https://www.surveymonkey.com/r/2x2_Series_Speaker_Application) and the Products and Resources Catalog [here](https://www.surveymonkey.com/r/2x2_Series_Speaker_Application).

**STAY INFORMED! SUBSCRIBE TO MHTTC PATHWAYS HERE**

MHTTC Pathways is a monthly eNewsletter that keeps you informed about what is happening within the MHTTC Network. It highlights events, training opportunities, resources, and the latest Network products. Special features help you stay updated on the latest on evidence-based practices, implementation science, and workforce development.
The incidence of mental health and substance use problems has increased dramatically due to the COVID-19 crisis. The situation is even worse for Black, Indigenous, and people of color (BIPOC) populations, which have long experienced disparities in access to care.

July marks BIPOC Mental Health Awareness month (formerly known as Minority Mental Health Awareness Month), which highlights the disparate impacts of mental illness, substance use, and behavioral health care on communities of color. BIPOC are less likely to access the care they need compared to their white counterparts and are more likely to be uninsured or experience stigma related to mental illness. According to the Substance Abuse Mental Health Services Administration, nearly 67% of Latino and 69% of Black Americans did not receive treatment for mental illness in 2018 compared to 56.7% of the general population.

Join BPC on July 21 as we discuss how COVID-19 exacerbated the adverse impact of behavioral health care access for special populations, specifically BIPOC, and how integrating behavioral health services with primary care can benefit these groups.

**Featured Participants**

*Keynote remarks by: Vice Admiral Jerome M. Adams, M.D., M.P.H ● U.S. Surgeon General*

*Panel discussion with:*

- **Anita Burgos, Ph.D. ● Senior Policy Analyst, Bipartisan Policy Center**
- **Dr. Patrice A. Harris ● Immediate Past President, American Medical Association**
- **Keris Jän Myrick ● Chief of Peer and Allied Health Professions, Los Angeles County Department of Mental Health**
- **Brian D. Smedley, Ph.D. ● Chief of Psychology in the Public Interest, American Psychological Association**

*Moderated by:*

- **Kana Enomoto ● Senior Expert, McKinsey & Company**
Disasters have the potential to cause emotional distress. Some are more at risk than others:
- Survivors living or working in the impacted areas (youth & adults)
- Loved ones of victims
- First Responders, Rescue & Recovery Workers.

Stress, anxiety, and depression are common reactions after a disaster.

Warning signs of distress may include:
- Sleeping too much or too little
- Stomachaches or headaches
- Anger, feeling edgy or lashing out at others
- Overwhelming sadness
- Worrying a lot of the time; feeling guilty but not sure why
- Drinking alcohol, smoking or using tobacco more than usual;
- Feeling like you have to keep busy
- Lack of energy or always feeling tired
- Eating too much or too little
- Not connecting with others
- Feeling like you won't ever be happy again
TIPS FOR COPING WITH STRESS AFTER A DISASTER:

*Take care of yourself.* Try to eat healthy, avoid using alcohol and drugs, and get some exercise when you can— even a walk around the block can make a difference.

*Reach out to friends and family.* Talk to someone you trust about how you are doing.

*Talk to your children.* They may feel scared, angry, sad, worried, and confused. Let them know it’s okay to talk about what’s on their mind. Limit their watching of TV news reports about the disaster. Help children and teens maintain normal routines to the extent possible. Role model healthy coping.

*Get enough ‘good’ sleep.* Some people have trouble falling asleep after a disaster, others keep waking up during the night.

If you have trouble sleeping:

- Only go to bed when you are ready to sleep
- Don’t watch TV or use your cell phone or laptop computer while you’re in bed
- Avoid eating (especially sugar) or drinking caffeine or alcohol at least one hour before going to bed
- If you wake up and can’t fall back to sleep, try writing in a journal or on a sheet of paper what’s on your mind.

*Take care of pets or get outside into nature when it’s safe.* Nature and animals can help us to feel better when we are down. See if you can volunteer at a local animal shelter— they may need help after a disaster. Once it’s safe to return to public parks or natural areas, find a quiet spot to sit in or go for a hike.

*Know when to ask for help.* Signs of stress can be normal, short-term reactions to any of life’s unexpected events— not only after surviving a disaster, but also after a death in the family, the loss of a job, or a breakup.

It’s important to pay attention to what’s going on with you or with someone you care about, because what may seem like “everyday stress” can actually be:

- Depression (including having thoughts of suicide)
- Anxiety
- Alcohol or Drug Abuse.

If you or someone you know may be depressed, suffering from overwhelming feelings of anxiety, or possibly abusing alcohol or drugs ... Call 1-800-985-5990 or text ‘TalkWithUs’ to 66746.

*You Are Not Alone.*
National Institutes of Health
Funding Opportunity Announcements

Emergency Award: RADx-UP Coordination and Data Collection Center (CDCC)
(U24 Clinical Trial) (RFA-OD-20-013)

Application Due Date: August 7, 2020
Letter of Intent Due Date: July 6, 2020
Earliest Estimated Award Date: September 2020

Estimated Total Funding: $7.5 million
Expected Number of Awards: 1
Earliest Start Date: September 2020

NIH is issuing this FOA in response to the declared public health emergency issued by the Secretary, HHS, for 2019 Novel Coronavirus (COVID-19). This emergency cooperative agreement funding opportunity announcement (FOA) from the National Institutes of Health (NIH) provides an expedited funding mechanism as part of the Rapid Acceleration of Diagnostics-Underserved Populations (RADx-UP) initiative, a consortium of community-engaged research projects to understand factors that have led to disproportionate burden of the pandemic on the underserved and/or vulnerable populations so that interventions can be implemented to decrease these disparities. This FOA seeks to fund a single Coordination and Data Collection Center (CDCC) as an integral part of the consortium. The funding for this supplement is provided from the Paycheck Protection Program and Health Care Enhancement Act, 2020.

The CDCC will serve as a national resource, working with NIH scientific staff and consortium members to coordinate and facilitate research activities. The CDCC will also serve as a spoke in the larger NIH initiatives by providing de-identified individual data to an NIH-based data center. The RADx-UP CDCC will provide overarching support and guidance in the following four domains: (1) Administrative Operations and Logistics, (2) COVID-19 Testing Technology, (3) Community and Health System Engagement and (4) Data Collection, Integration and Sharing. The CDCC will facilitate RADx-UP collaborative research by providing organizational and analytical infrastructure and expertise, supporting data integration and analysis, and coordinating across RADx-UP projects and the NIH-supported RADx initiatives that are developing and validating new COVID-19 testing technologies.

This FOA is therefore released in parallel with three companion emergency Notices of Special Interest (NOSIs):

1. Notice of Special Interest (NOT-OD-20-121): Solicits emergency competitive revision applications to existing awards for large consortia, multi-site trials, centers and other current networks that have adequate capacity, infrastructure, and established community-engaged relationships to support large-scale COVID-19 testing interventions or have the capacity to ramp up quickly to reach underserved or vulnerable populations. The single submission date is August 7, 2020. See: https://grants.nih.gov/grants/guide/notice-files/NOT-OD-20-121.html

2. Notice of Special Interest (NOT-OD-20-120): A complementary emergency competitive revision opportunity that shifts eligibility to collaborative and individual research awards, generally focused on smaller underserved or vulnerable populations. The two submission dates are August 7, 2020 and September 8, 2020. See: https://grants.nih.gov/grants/guide/notice-files/NOT-OD-20-120.html

Researchers planning to apply are strongly encouraged to read all four of these interrelated funding opportunities.

Eligible Entities
Public/State Controlled Institution of Higher Education Private Institution of Higher Education Nonprofit with and without 501(c)(3) IRS Status (Other than Institutions of Higher Education)
Small Businesses For-Profit Organization (Other than Small Businesses)
State Governments County governments City or township governments
Special district governments Independent school districts Public housing authorities/Indian housing authorities
Indian/Native American Tribally Designated Organization (Native American tribal organizations (other than Federally recognized tribal governments))
U.S. Territories or Possessions Indian/Native American Tribal Government (Federally Recognized)
Faith-Based or Community-Based Organizations Regional Organizations

Foreign Institutions
Non-domestic (non-U.S.) Entities (Foreign Institutions) are not eligible to apply.
Non-domestic (non-U.S.) components of U.S. Organizations are not eligible to apply.

Foreign components, as defined in the NIH Grants Policy Statement, are not allowed.

NIH will hold two pre-application webinars:

- Friday, June 26, 2:00 p.m. to 4:00 p.m. E.T., an overview of the RADx-UP initiative, followed by presentations on each funding opportunity and question and answer sessions; and
- Wednesday, July 1, 3:00 p.m. to 5 p.m. E.T., focusing on applications for the Coordinating and Data Collection Center Registration is required. Register and learn more about these webinars at https://www.nih.gov/research-training/medical-research-initiatives/radx/events.

Questions can be pre-submitted for these sessions at RADXinfo@nih.gov by June 24 for the first session and June 29 for the latter session.

Research on Co-Morbid Substance Use, Substance Use Disorders, and Other Psychiatric Disorders

The purpose of this Notice is to encourage the submission of research project grant applications that address co-morbid substance use and/or substance use disorders, and other psychiatric disorders. Research in response to this NOSI may include etiologic investigations to inform prevention intervention, intervention development and testing, and research to address service delivery strategies to address co-morbid conditions. The intent is to encourage a broad portfolio of research, that enhances understanding of risk, etiology, prevention, treatment and service delivery related to co-occurring conditions.

Background:
The association between substance use, substance use disorders, and psychiatric disorders, including depression, anxiety, bipolar disorder, ADHD and other externalizing disorders, has been well established through population based epidemiologic surveys. Numerous developmentally focused theory-based approaches have been proposed, including shared underlying vulnerabilities or risk factors. From a disorder perspective, prevalence can be expressed as either the prevalence of other psychiatric disorders among substance using populations or the prevalence of substance use among individuals with other psychiatric disorders, leading to variability in rates. Mental illness is often characterized as a risk factor for substance use initiation and for transition from use to misuse and disorder, though the exact sequence and relationship between substance use, substance use disorders and psychiatric co-morbidity is unclear and may vary by disorder. For some substances and disorders, it may be the substance use that precedes the onset of other psychiatric symptoms. Additional research is needed to determine the various trajectories of substance use and psychiatric symptoms, as well as strategies for intervention to change trajectories.

Research Objectives:
The National Institute of Drug Abuse (NIDA) is interested in research project grant applications that would further our understanding of co-morbidity through studies that test etiological theories and interventions (treatment and prevention), across the lifespan.

NIDA interest includes, but is not limited to, applications in the following areas:

- Epidemiologic studies of the etiology of co-morbidity that directly lead to the development of targeted preventive intervention research projects: of priority are studies that include prevention scientists as part of the research team, to facilitate the application of findings into next phase prevention intervention development. These can include primary data collection or secondary data analyses.

- Studies of the trajectories of the development of co-morbid substance use, substance use disorders and psychiatric disorders and the ways in which their interactions influence the onset, course and recovery of both; of interest are studies which additionally identify potentially effective points and models of intervention.

- Intervention research to directly address common mechanisms/dimensions that may underlie both substance use disorders and other psychiatric disorders. Among treatment seeking populations, studies to determine whether or how the receipt of evidence-based treatments for psychiatric disorders impact substance use initiation and/or progression to misuse and disorder.

- Strategies for augmenting psychiatric care to prevent substance use initiation and/or progression from use to misuse or disorder. This could include research to test whether and how models of care delivery for mental illness (e.g., the collaborative care model, coordinated specialty care for first episode psychosis) could be leveraged for substance use prevention among at-risk individuals.

- Studies to further understand and prevent suicide and other adverse outcomes (morbidity and mortality) among individuals using illicit substances.

- Research that uses clinically validated digital therapeutics, including mobile applications and other platforms, virtual reality, wireless monitoring and biofeedback, imaging tools for biofeedback to develop, improve and systematically measure behavioral interventions for substance use and psychiatric conditions. Additionally, neuromodulation devices to augment behavior therapies.

- Studies to evaluate the use of medications to improve the efficacy of behavioral interventions for co-morbidities.

- Research to promote adherence to pharmacotherapies, such as buprenorphine, methadone, depot naltrexone, Lofexidine, naloxone, or HAART, in substance abuse treatment populations with comorbidities.

- Studies that develop safe and effective psychosocial interventions to improve the outcomes of pharmacotherapies for substance use disorders including opioid use disorder, overdose reversal, and preventive efforts for psychiatric and suicide risk.

- Research on tobacco harm reduction strategies such as switching from combustibles to e-cigarettes with special attention to individuals with severe mental illness (e.g., schizophrenia, bipolar depression).

- Services research to develop and test strategies to improve system- or provider- capacity for treating and managing co-occurring conditions.

Research on Co-Morbid Substance Use, Substance Use Disorders, and Other Psychiatric Disorders

(Continued from previous page)

Application and Submission Information

This notice applies to due dates on or after October 05, 2020 and subsequent receipt dates through May 8, 2023

Submit applications for this initiative using one of the following funding opportunity announcements (FOAs) or any reissues of these announcement through the expiration date of this notice.

- **PA-20-185**: NIH Research Project Grant (Parent R01 Clinical Trial Not Allowed)
- **PA-20-183**: NIH Research Project Grant (Parent R01 Clinical Trial Required)
- **PA-20-184**: Research Project Grant (Parent R01 Basic Experimental Studies with Humans Required)
- **PA-20-200**: NIH Small Research Grant Program (Parent R03 Clinical Trial Not Allowed)
- **PA-20-196**: NIH Exploratory/Developmental Research Grant Program (Parent R21 Basic Experimental Studies with Humans Required)
- **PA-20-195**: NIH Exploratory/Developmental Research Grant Program (Parent R21 Clinical Trial Not Allowed)
- **PA-20-194**: NIH Exploratory/Developmental Research Grant Program (Parent R21 Clinical Trial Required)
- **PA-18-775**: Pilot and Feasibility Studies in Preparation for Drug and Alcohol Abuse Prevention Trials (R34 Clinical Trial Optional) or any re-issuances

All instructions in the **SF424 (R&R) Application Guide** and the funding opportunity announcement used for submission must be followed, with the following additions:

- For funding consideration, applicants must include “NOT-DA-20-004” (without quotation marks) in the Agency Routing Identifier field (box 4B) of the SF424 R&R form. Applications without this information in box 4B will not be considered for this initiative.

Applications nonresponsive to terms of this NOSI will not be considered for the NOSI initiative.

**Inquiries:** Please direct all inquiries to the contacts in Section VII of the listed funding opportunity announcements with the following additions/substitutions:

**Scientific/Research Contact:** Amy B. Goldstein, Ph.D., National Institute on Drug Abuse (NIDA), 301-827-4124, amy.goldstein@nih.gov

Let's Meet Virtually at the
Academy Health Annual Research Meeting (ARM)
July 28 to August 6, 2020

The largest meeting of health services researchers, policymakers, and the broader health care community is going online in 2020.

Registration includes access to all recorded live and on-demand sessions and post-ARM content for a full calendar year.

REGISTER TODAY

REGISTER TODAY and Receive Dr. Ruha Benjamin's Latest Book

The first 1,000 ARM registrants will receive an eBook copy of Dr. Benjamin's, Race After Technology, for Amazon Kindle. Recipients will receive a link to download the eBook prior to the virtual ARM.

Same Great ARM, New Virtual Benefits

- More than 70 hours of content! Featuring 8 live presentations with real-time Q&A and 70+ on-demand panel sessions - based on 21 conference themes.
- Control your learning experience. Never miss a session and participate at your leisure with access to all recorded live and on-demand presentations for a full calendar year.
- Explore the latest research on a diverse range of topics at the interactive poster hall.
- Browse valuable resources and information made available by participating organizations at the digital exhibit hall.
- Engage in unique group and/or one-to-one virtual networking opportunities.

The MHDD-NTC is a collaboration between the University Centers for Excellence in Developmental Disabilities at the University of Kentucky, University of Alaska Anchorage, and Utah State University. Established in 2018 through funding provided by the Administration for Community Living, the training center aims to improve mental health services and supports for people with developmental disabilities. By serving not only as a training center, but also as a national clearinghouse, the training center helps provide access to the most current evidence-based, trauma-informed, culturally responsive practices that address the mental health needs of individuals with developmental disabilities. Please visit their website at https://mhddcenter.org/
We strongly encourage you to register online at our website for the fastest and most efficient process.

SEPTEMBER 10, 2020

8:00 am – 5:00 pm

RECORDED PLENARIES AND WORKSHOPS: Available to access online for two weeks after the conference, so you can attend all in one day or spread it out over two weeks.
NASMHPD continues to receive recognition from the behavioral health community at large, including from our friends at SAMHSA, for our 2017 and 2018 Beyond Beds series of papers highlighting the importance of providing a continuum of care beyond institutional inpatient care.

A 2019 multiple-paper follow-up to the Beyond Beds series is now up on the NASMHPD website. The 2019 papers take the Beyond Beds theme to look at additional innovative approaches offered in the community and factors impacting those services, covering such topics as early antipsychotic prescribing practices in nursing homes, developing a behavioral health workforce, a public health approach to trauma and addiction, addressing behavioral health in traumatic brain injury treatment, recovery-oriented cognitive therapy, integration of mental health and substance use services for those with co-occurring conditions, schools as part of the continuum of care for children and adolescents, and addressing social and mental health needs in transition-age homeless youth.

One of those papers, Lessons from the International Community to Improve Mental Health Outcomes, authored by Deborah Pinals, M.D., chair of the NASMHPD Medical Directors Division and Medical Director, Behavioral Health and Forensic Programs in the Michigan Department of Health and Human Services, pivots from NASMHPD’s previous work in this series to look beyond the borders of the United States to other countries for examples of successful and promising strategies across nine areas of focus. The paper’s highlighted examples from the international community aim to further illuminate strategies and inspire ongoing crucial dialogue in an effort to improve mental health in the United States.

Following are links to the other reports in the 2019 Technical Assistance Coalition series.

Student Mental Health: Responding to the Crisis

Mary Ward House Conference & Exhibition Centre, London

Tuesday, October 6, 2020

This conference will break-down the cultures, economic factors, social and institutional pressures contributing to dramatic rises in disclosures of mental health issues at universities and student suicides.

Delegates will explore why more students are turning to unconventional incomes like gambling and sex work during their studies, how the university experience can compound cultural and environmental conditions that lead students to access and supply drugs; and discussing how cross-institutional co-operation as well as legislative review of attitudes towards information sharing could prevent students reaching a point of crisis.

With just over two months to go to this expected sell out event places are now at a premium. However you can still...

Student Mental Health: Responding to the Crisis is our third national conference bringing together domestic and European HE institutes, students, academic/policy researchers, health, social care and counselling services to develop pragmatic approaches to:

- Transitions of otherwise non-criminal student populations into drug use and supply created by financial instability, distance from guardians and the interconnected nature of student life.
- Preventing student suicides; developing best practices in data sharing between institutions and families – measuring the importance of student safety and public interest against data protection, as well as investing in welfare support services and advanced planning.
- Isolation and instability created by increases in students engaging with sex work and gambling as a means of meeting the cost of university life.
- Cultures of anxiety driven by transitions in curriculum and lifestyle, persecutory perfectionism, unrealistic expectations projected on new media platforms, institutional pressures and uncertainty around post-university employment opportunities.
- Normalization of competitive and insecure working cultures in the HE sector – how does this impact the human value of academic labor and the support available to young people struggling with their studies.

Webinar Series
Supporting Reentry for People with Mental and Substance Use Disorders:
Establishing Recovery Housing
Tuesday, July 30, 12:30 p.m. to 2:00 p.m. E.T.

Learn strategies and approaches to successful recovery housing development, funding, and implementation.

Register HERE

SAMHSA’s GAINS Center for Behavioral Health and Justice Transformation uses its Virtual Learning Community (VLC) model to deeply explore topics of interest to the field centered around a common theme. VLCs are composed of a series of webinars, small discussion groups, and webinar supporting materials. These communities are open to the field at no cost to the participant. Each webinar provides an opportunity to hear from national experts and state representatives. The presenters offer guidance on best and promising practices as well as practical lessons learned from on-the-ground experience. Selected webinars are followed by a small-group discussion, where audience members can engage directly with the presenters to learn more about the topics of discussion.

Transform to Teleservices: Innovative Approaches to Substance Use Disorder Treatment Happening Now in Drug Courts
Part I - Tuesday, August 11, 1:00-2:30 p.m. E.T.

As technological innovations in health care continue to emerge, and as research is confirming the effectiveness of these approaches that rely on both new and established technologies, drug courts across the country are starting to transform the way they work by implementing teleservices in order to improve access to medication-assisted treatment (MAT) as well as a range of evidence-based psychosocial supports for the treatment of substance use disorders (SUD). Part I of this Virtual Learning Community webinar series will provide an overview of the emerging teleservices landscape and the opportunities brought about by this shift in methodology, review the evidence base for SUD treatment services delivered via teleservices technologies, and share potential strategies for the implementation of SUD teleservices in drug courts, including a review of the types of SUD services that can be effectively leveraged via telehealth along with models of care that highlight the mechanisms of collaboration between drug courts and community-based treatment providers.

Additional topics to be addressed include rolling redesign pertaining to telehealth regulations, reimbursement, and confidentiality, focusing on emerging opportunities for the expansion of teleservices in drug courts.

PRESENTERS

- Michael Chaple, Ph.D., Assistant Professor of Clinical Psychiatry, New York State Psychiatric Institute, Columbia University Medical Center
- Maryellen Evers, LCSW, CAADC, Telebehavioral Health Trainer, Center for the Application of Substance Abuse Technologies at the University of Nevada, Reno
- Nancy Roget, M.S., M.F.T., LADC, Executive Director, Center for the Application of Substance Abuse Technologies at the University of Nevada, Reno

Register HERE for PART I

Part II - Tuesday, August 18, 1:00-2:30 p.m. E.T.

Several drug courts across the country have successfully leveraged teleservices in order to increase client access to medication-assisted treatment as well as a range of evidence-based psychosocial supports for the treatment of substance use disorders (SUD). Part II of this Virtual Learning Community webinar series will feature presentations from drug court practitioners and substance use treatment providers who will outline the various approaches they have taken to integrate teleservices in drug court. Case examples will illustrate several unique models of implementation, including:

- development of a comprehensive teleservices track in drug court,
- drug court partnerships with distance-based SUD telemedicine providers,
- drug court partnerships with community-based SUD treatment providers who offer remote services, and
- the integration of virtual counseling platforms.

Register HERE for PART II
Multi-Part Virtual Learning Community

Webinar Series

Implementing A Peer Mentor Program: Strategies for Engaging Peer Recovery Support Specialists in Adult Treatment Courts

Monday, August 31, 12:30 p.m. to 2:00 p.m. E.T.

Learn how to engage Peer Recovery Support Specialists (PRSSs) in adult treatment courts to support people with substance use disorders and co-occurring mental disorders.

Peer Recovery Support Specialists (PRSSs) working in treatment courts are people with lived experience of behavioral health disorders and criminal justice involvement who are key members of the clinical team serving those participating in drug court and mental health court programs.

This webinar covers strategies for how to engage PRSSs in adult treatment courts to support people with substance use disorders and co-occurring mental disorders. Topics covered will include training peers to work in treatment courts, identifying key community partners for an effective peer mentoring program, defining core activities of peers working in treatment courts, the peer certification process, and oversight and management of peer programs. Real-life examples of successful implementation in the state of Oklahoma will be shared.

AHRQ Announces New Challenge Competition Focusing on Postpartum Mental Health Care for Rural Families

The Agency for Healthcare Research and Quality (AHRQ) has announced a challenge competition to highlight local innovations to improve postpartum mental health care for rural American families. The total prize pool for the competition is $175,000.

The two-fold purpose of the challenge is to amplify innovative programs that rural communities already are implementing to address challenges to postpartum mental health diagnosis and treatment and elicit new solutions. AHRQ plans to share the information with rural communities, healthcare systems, healthcare professionals, local and state policy makers, federal partners, and the public. Rapid shifts in the healthcare landscape have highlighted the need to create solutions to support community-based, digital, and non-traditional solutions to provide services to mothers experiencing postpartum mental health issues in rural America.

One in seven mothers experiences a postpartum mental health condition, defined as the onset of depression or anxiety within one year of giving birth. Rural women and families face barriers to accessing adequate care for postpartum mental health problems. Such barriers may include limited availability of mental health care providers, and difficulties arranging for child care, transportation, and payment. The current COVID-19 pandemic, with its disruption of traditional employment and social supports, highlights the need for new solutions to a longstanding problem. Prior research suggests that higher levels of stressors during pregnancy and the delivery period are associated with greater prevalence of postpartum depression.

Through this new challenge, AHRQ is interested both in success stories that highlight community achievements and new program proposals that demonstrate innovative planning for community action to improve postpartum mental health. Organizations that serve rural communities, including health care providers, community-based organizations and clubs, faith-based groups, cooperative extension services, schools, hospitals, local health departments, and state, territorial, and tribal organizations are eligible to submit proposals that highlight successful or promising programmatic interventions to improve rural postpartum mental health.

AHRQ is hosting this challenge during Women’s Health Month as a single-phase competition with two categories: success stories and proposals. Applicants may only submit proposals in one category. Submissions are due in September, and AHRQ plans to announce challenge winners during Rural Health Month (November).

There will be five winners in the Success Story Category, with each receiving $15,000.

There will be two winners in the Program Proposal Category, with each receiving $50,000.

For more information, visit the AHRQ Cross-Sectional Innovation to Improve Rural Postpartum Mental Health Challenge website.
Training and Technical Assistance Related to COVID-19 Resources

Responding to COVID-19: highlight products and resources that can be useful when coping with the effects of widespread public health crises such as::

Compassion Fatigue and the Behavioral Health Workforce Curriculum Infusion Package -

This 5-part Curriculum Infusion Package (CIP) on Compassion Fatigue and the Behavioral Health Workforce was developed in 2020 by the Pacific Southwest Addiction Technology Transfer Center (PSATTC). Part 1 provides a brief overview of the behavioral health workforce and associated shortages, and introduces the demands on the workforce. Part 2 focuses on compassion fatigue and secondary traumatic stress. Part 3 provides a brief overview of how organizations can help individuals avoid experiencing burnout. Part 4 focuses on actions that behavioral health professionals can take to prevent compassion fatigue. And Part 5 focuses on self-care as an ethical duty in order to manage compassion fatigue.

**Mental Health & Wellness Guide for Public Service Professionals**

Being able to make a positive impact is what makes working in a public service field so special. From the school social worker keeping a group of at-risk teens on track to graduate, to the rookie cop protecting the neighborhood she grew up in, to the critical care nurse pulling a double shift during a healthcare crisis, public service professionals represent the best in all of us. Yet this same capacity and desire to do good often comes at the cost of mental health and wellness. Being overworked, dealing with life-and-death situations, and concerns over funding are just a few of the triggers that can lead to serious issues like compassion fatigue, burnout, and traumatic stress. And when symptoms do arise, it can be hard to ask for help when you’re the one who usually provides it.

This guide explores mental health issues that public service professionals are most at risk for, the common stressors that cause them, and solutions and resources to get well. While this guide is not meant to (and should not) replace professional medical advice, it can help serve as a starting point for understanding and dealing with the mental health challenges of being in a helping career.

**Access the Guide HERE**
NIMH Funding Opportunity Announcement

Implementing and Sustaining Evidence-Based Mental Health Practices in Low-Resource Settings to Achieve Equity in Outcomes (R34 Clinical Trial Required) – RFA-MH-20-401

Application Due Date: August 25, 2020, 5:00 p.m. Local Time of Applying Entity

This Funding Opportunity Announcement (FOA) supports pilot work for subsequent studies testing the effectiveness of strategies to deliver evidence-based mental health services, treatment interventions, and/or preventive interventions (EBPs) in low-resource mental health specialty and non-specialty settings within the United States. The FOA targets settings where EBPs are not currently delivered or delivered with fidelity, such that there are disparities in mental health and related functional outcomes (e.g., employment, educational attainment, stable housing, integration in the community, treatment of comorbid substance use disorders, etc.) for the population(s) served. Implementation strategies should identify and use innovative approaches to remediate barriers to provision, receipt, and/or benefit from EBPs and generate new information about factors integral to achieving equity in mental health outcomes for underserved populations. Research generating new information about factors causing/reducing disparities is strongly encouraged, including due consideration for the needs of individuals across the life span. Applications proposing definitive tests of an implementation strategy should respond to the companion R01 announcement RFA-MH-20-400.

This initiative supports pilot work in support of subsequent studies testing the effectiveness of strategies to deliver EBPs in low-resource settings in the United States, in order to reduce disparities in mental health and related functional outcomes (e.g., employment, educational attainment, stable housing, integration in the community, treatment of co-morbid substance use disorders, etc.) for the population(s) served. Of interest are settings where a significant number of children, youth, adults, or older adults with or at risk for mental illnesses can be found and evidence-based mental health treatments or services are not currently delivered. Applications focused on developmental work that would enhance the probability of success in subsequent larger scale projects are also encouraged.

Developmental work might include: refining details of the implementation approach; examining the feasibility of novel approaches and technologies; examining the feasibility of data collection including administration of instruments, obtaining administrative or other types of data, etc.; enhancing the protocol for the comparison group and randomization procedures (if appropriate); examining the feasibility of recruiting and retaining participants into the study condition(s); and developing and testing supportive materials such as training curricula. Therefore, collection of preliminary data regarding feasibility, acceptability and engagement of intervention targets is appropriate. However, given the intended pilot nature of the R34 activity code, conducting fully powered tests of outcomes or attempting to obtain an estimate of an effect size may not be feasible.

The goal of this FOA is to conduct pilot work in support of subsequent studies that develop test the effectiveness of scalable implementation strategies to achieve delivery of EBPs with high fidelity in low-resource settings and significantly improve clinical and functional outcomes toward greater equity with outcomes documented the general population studies.

Eligibility

Public/State Controlled Institutions of Higher Education
Private Institutions of Higher Education

The following types of Higher Education Institutions are always encouraged to apply for NIH support as Public or Private Institutions of Higher Education:

- Hispanic-serving Institutions
- Historically Black Colleges and Universities (HBCUs)
- Tribally Controlled Colleges and Universities (TCCUs)
- Alaska Native and Native Hawaiian Serving Institutions
- Asian American Native American Pacific Islander Serving Institutions (AANAPISIs)

Nonprofits with and without 501(c)(3) IRS Status (Other than Institutions of Higher Education)

Small Businesses For-Profit Organizations Other Than Small Businesses
State Governments County Governments City or Township Governments Special District Governments
Indian/Native American Tribal Governments (Federally Recognized & Other than Federally Recognized)
U.S. Territories or Possessions Independent School Districts Public Housing Authorities Indian Housing Authorities
Native American Tribal Organizations (other than Federally recognized tribal governments)
Faith-Based or Community-Based Organizations Regional Organizations

NOT Eligible to Apply: Non-domestic (non-U.S.) Entities (Foreign Institutions) . Non-domestic (non-U.S.) components of U.S. Organizations. Foreign components, as defined in the NIH Grants Policy Statement.
NOW RECRUITING

_CSC OnDemand: An Innovative Online Learning Platform for Implementing Coordinated Specialty Care_

Combining the strongest components of OnTrack and the evidence-based Individual Resilience Training (IRT) of NAVIGATE, C4 Innovations is offering a new training in coordinated specialty care. This is an ideal opportunity for teams to receive new or refresher training in CSC. The tool will offer scalable, efficient professional development for CSC teams.

Now recruiting both new and already-established CSC teams interested in participating in a research study. Our goal is to test our new training tool with practitioners in the field. Your feedback will help us refine the tool, share what we learn, and improve services for people experiencing first episode psychosis.

**What Can Teams EXPECT?**

- Comprehensive, role-specific training for all team members, including peers, offered at no charge to teams
- Courses, consultation calls, and a community of practice led by experts in the field. See reverse for full list of expert trainers.
- Opportunity for refresher training for existing teams and teams with new members.
- Teams will be randomized into two groups:
  - Group 1 teams will receive training on June 24 – June 26
  - Group 2 will receive training between July 8 – July 24
- Opportunity to provide critical feedback on a new CSC training tool

**HOW CAN MY AGENCY TAKE PART?**

Call our Research Coordinator, Effy: 347-762-9086
Or email: cscstudy@center4si.com
Iruma Bello, PhD | Clinical Training Director, OnTrackNY
Dr. Bello is an Assistant Professor of Clinical Psychology in Psychiatry. She is also the Clinical Training Director of OnTrackNY at the Center for Practice Innovations within the Division of Behavioral Health Services and Policy Research at Columbia University. She graduated with her PhD in Clinical Psychology from the University of Hawaii- Honolulu.

Abaigael Duke | Recovery Specialist and Trainer, OnTrackNY
A NYS certified peer specialist, Abaigael currently serves as a Recovery Specialist and Trainer for OnTrack NY. She has worked as a peer specialist in a variety of settings through the NYS Office of Mental Health, including clinics and as a member of an ACT team. She was based in the OMH NYC field office as an Advocacy Specialist in the Children's Services division.

Susan Gingerich, MSW | Training Coordinator, NAVIGATE
Susan Gingerich has been closely involved with the NAVIGATE First Episode of Psychosis program since 2009, helping to develop all the manuals and providing consultation calls for the directors of 17 NAVIGATE programs during the research phase of The Recovery After An Initial Schizophrenia Episode (RAISE) initiative. She is currently the training coordinator for the NAVIGATE Program.

Thomas Jewell, PhD | Project Manager, Center for Practice Innovations (CPI) Division of Behavioral Health Services and Policy Research
Tom Jewell, PhD is on the staff of the CPI, Columbia University, New York State Psychiatric Institute and the Department of Psychiatry at the University of Rochester, School of Medicine and Dentistry. His specialty has been in evaluation and research into evidenced-based practices. He is a family intervention trainer with OnTrackNY, which deals with first episode psychosis.

Nev Jones, PhD | Assistant Professor, University of South Florida | Department of Mental Health Law & Policy | Louis de la Parte Florida Mental Health Institute
Dr. Jones received her Ph.D. from DePaul University, followed by a postdoctoral fellowship at Stanford University in medical anthropology and psychiatry. Dr. Jones has worked in leadership positions in both state government and nonprofit community mental health. Her research covers social, cultural and structural determinants of disability and recovery, youth and young adult behavioral health services, and peer and family support.

Piper Meyer-Kalos, PhD, LP | Director of Research and Evaluation, Minnesota Center for Chemical and Mental Health
Piper Meyer-Kalos, PhD, HCP-P, holds her doctoral degree in Clinical Rehabilitation Psychology from Indiana University – Purdue University, Indianapolis and specializes in psychiatric rehabilitation and treatment for FEP with interests in recovery, positive psychology, and psychosocial treatment for people with severe mental illness. Since 2009, Dr. Meyer-Kalos has been part of the psychosocial development team of RAISE project and has co-led the individual therapy component (IRT).

Ilana Nossel, MD | Medical Director, OnTrackNY | Assistant Professor, Columbia University Medical Center
Dr. Nossel practices general adult psychiatry, including consultation, psychotherapy and medication management. She currently serves as the Medical Director of OnTrack NY. She previously worked as Associate Director of the PI Residents Clinic and completed a pilot study adapting Critical Time Intervention (CTI) for frequent users of the psychiatric emergency room.

Gary Scannevin, Jr., M.P.S., CPRP | IPS Trainer Center for Practice Innovations (CPI) Division of Behavioral Health Services and Policy Research, New York State Psychiatric Institute
Gary has worked in the mental health sector of healthcare for 29 years. He is currently an IPS Trainer at the CPI at Columbia University Psychiatry, where his primary mission is training Supported Education and Employment Specialists (SEES) in both OnTrackNY and OnTrackUSA.

Delbert Robinson, MD | Associate Professor, The Center for Psychiatric Neuroscience, Feinstein Institutes for Medical Research
Dr. Robinson has led NIMH-funded studies focused upon first episode schizophrenia, tools to enhance antipsychotic medication adherence, and obsessive-compulsive disorder. For the RAISE-ETP study, he chaired the Psychopharmacological Treatment Committee. He was the primary developer of the Medications manual for RAISE-ETP and has provided training and consultation for NAVIGATE prescribers since 2009.
Zero Suicide International 5
May 10 to 12
POSTPONED TO EARLY FALL, 2020, Anfield Stadium, Liverpool, UK
in Partnership with Mersey Care NHS Foundation Trust

Leaders from countries around the world came together in Rotterdam, the Netherlands in September 2018 for Zero Suicide International 4. As a result, the 2018 International Declaration was produced with a video complement, The Zero Suicide Healthcare Call to Action.

During the fifth international summit, our goal is to identify the three next key steps through inspiration, ideation, and implementation.

Please note a key change for 2020: Prior ZSI events have been invitation only. Our first three events in 2014, 2015, and 2017 were all part of the International Initiative for Mental Health Leadership (IIMHL) events and followed their small match meeting format (with 40 to 70 participants only), with Rotterdam in 2018 being the first ZSI event to stand on its own (over 100 leaders joined). For Liverpool 2020, we will partner with Joe Rafferty and, together with the Zero Suicide Alliance hosting up to 500 or more in the Liverpool Football Club. For the first time, no invitation will be required and all interested in advancing safer healthcare are welcome to join.

In order to ensure the Liverpool summit maintains the strong focus on networking and action steps of our prior more intimate convenings, we are working with the Flourishing Leadership Institute and their amazing team experienced in whole-system change. We'll be harnessing the complete power of the group’s collective experience and imagination to drive forward the next successes in Zero Suicide Healthcare, and everyone who participates will be engaged.

Interested in becoming a sponsor? Contact karen.jones@riinternational at RL International or justine.maher@merseycare.nhs.uk at Mersey Care for details on available sponsorship packages. We're excited the American Foundation for Suicide Prevention has committed their support and look forward to connecting with many others who will help us make this event and its outcomes a success.

Nominate a Dr. Jan Mokkenstorm International Zero Suicide Visionary Award Winner

This year's International Zero Suicide Summit will be bittersweet as our first without our beloved colleague Jan Mokkenstorm. During the Summit in Liverpool, the first annual Jan Mokkenstorm Zero Suicide Visionary Award will be presented in his honor. Below is information on the award and instructions for nominating someone. We look forward to seeing everyone in Liverpool and remembering Jan's contributions to making sure no one dies alone and in despair.

Dr. Jan Mokkenstorm played an integral part of the inaugural International Zero Suicide Summit with the International Initiative for Mental Health Leadership match in Oxford in 2014. In subsequent years, Dr. Mokkenstorm attended the International Zero Suicide Summits in Atlanta (2015), and Sydney (2017) in his continued commitment to the global Zero Suicide Movement. He provided vital participation in the collaborative development of the “International Declaration for Better Healthcare: Zero Suicide” in 2015. He also continued the push for the initiative to “move beyond the tipping point” by hosting the 4th international Zero Suicide Summit in Rotterdam in 2018.

Jan demonstrated his passionate commitment to reducing suicides through his tireless efforts to promote the belief that suicides should never be an event that occurs. Through visionary leadership he inspired countless others to join this cause themselves on an individual, organizational, and community level. He was instrumental in spreading the global adoption of the Zero Suicide mission as well as set the pace for innovation and substantial change in many countries across the globe. Simply put, Jan demonstrated exceptional service to the betterment of society through his work with Zero Suicide and suicide prevention.

Nomination Requirements
1. Must have shown national/international leadership in the area of suicide prevention
2. Must have participated in fostering substantial change and innovation in the area of suicide prevention
3. Must have challenged/helped shape government policies and supported a wider awareness and discussion around suicide prevention
4. Must be in attendance at the International Zero Suicide Summit when the award will be presented
5. Must have two (2) letters of recommendation from recognized suicide prevention leaders in one’s home country

Judging
1. The announcement of nominations will be handled by the host nation in conjunction with other communications about the Zero Suicide Summit
2. The host nation will convene a Nomination Committee of three individuals who will review the nominations and award one winner

If you have nominations or would like to participate, please contact Becky Stoll, Vice President, Crisis and Disaster Management at becky.stoll@centerstone.org.
The National Center of Excellence for Eating Disorders (NCEED) was created to serve as the centralized hub dedicated to eating disorders education and training for both healthcare providers and the general public. NCEED is partnering with the 3C Institute to develop and launch an interactive, web-based, educational, training platform to ensure that high-quality trainings are provided to health professionals across multiple disciplines.

Visit NCEED's Website at https://www.nceedus.org/

NCEED is the nation’s first center of excellence dedicated to eating disorders. It was founded in 2018 by the Substance Abuse and Mental Health Services Administration (SAMHSA), with the mission to advance education and training of healthcare providers and to promote public awareness of eating disorders and eating disorder treatment. Based at the University of North Carolina at Chapel Hill, NCEED includes clinicians, researchers, and advocates who specialize in eating disorders care and are committed to providing up-to-date, reliable, and evidence-based information.

The goal of NCEED is to ensure that all individuals with eating disorders are identified, treated, and supported in recovery. Though eating disorders are serious conditions, they can be identified and treated effectively—particularly when providers and the public have the knowledge and skills necessary to make a difference.

Information, Training, and Technical Assistance

The NCEED website (https://www.nceedus.org/) is designed to be user-friendly and easy to navigate for all users. The center’s web platform is divided into four content areas based on the user’s role. These content areas tailor the user’s experience in searching for up-to-date, evidence-based trainings and resources.

Get information on mental health services and resources near you, searchable by state or zip code: www.samhsa.gov/find-help

Behavioral Health Treatment Services Locator
National Center on Advancing Person-Centered Practices and Systems

NCAPPS assists states, tribes, and territories to transform their long-term care service and support systems to implement U.S. Department of Health and Human Services policy on person-centered thinking, planning, and practices. It supports a range of person-centered thinking, planning, and practices, regardless of funding source. Activities include providing technical assistance to states, tribes, and territories; establishing communities of practice to promote best practices; hosting educational webinars; and creating a national clearinghouse of resources to support person-centered practice. Visit the new NCAPPS website for more information.

Each month, NCAPPS will host monthly informational webinars on a range of topics that relate to person-centered thinking, planning, and practice. NCAPPS webinars are open to the public, and are geared toward human services administrators, providers, and people who use long-term services and supports. Webinars will be recorded and archived on the NCAPPS website. All webinars will include a panelist who represents the perspective of service users, including our Person-Centered Advisory and Leadership Group members, self-advocates, or other stakeholders with lived experience with the topic.

| July 2020 | Applying Person-Centered Thinking, Planning, and Practice in Long-Term Care Settings |
| August 2020 | Myths and Misperceptions about Financing Peer Support in Medicaid |
| September 2020 | Electronic Health Records in Person-Centered Care Planning: Pitfalls and Promises |
| October 2020 | Best Practice in Incorporating Supported Decision-Making and Person-Centered Thinking, Planning, and Practice |
| November 2020 | Person, Family, Clan, Community: Understanding Person-Centered Thinking, Planning, and Practice in Tribal Nations |
| December 2020 | Toward Person-Centered Transitions: Applying Person-Centered Thinking, Planning, and Practice for Youth with Disabilities in Transition |

NCAPPS has posted on its website a Health Care Person-Centered Profile to assist people with disabilities, older adults, and others to communicate their needs and preferences with hospital and other health care staff. Depending on state and hospital policy, people with communication, comprehension, and behavioral challenges may face the possibility of a hospital visit without significant others or usual supporters present. To address the heightened challenges this poses, a group of experts in person-centered planning developed a tool that people and their families and caregivers can fill out and share with medical staff upon hospital intake or care site transfer.

The tool has two pages: a Health Care Information sheet for capturing brief and vital information about the person’s health status and a Health Care Person-Centered Profile for describing who the person is, what is most important to the person, and how best to provide support—vital information that can help medical staff provide more tailored and person-centered care.

The Health Care Information Sheet also has a section for detailed contact information to help medical staff reach a person’s emergency contact or legal representative. It contains a section for indicating whether advance directives are in place and where those documents can be found.

The Profile, instructions, and sample profiles are available at: https://ncapps.acl.gov/covid-19-resources.html
The Treatment of Bipolar Depression: From Pills to Words
Friday, July 17, Noon to 1:00 p.m. E.T.

This webinar will review the array of treatment options for individuals with bipolar depression. The presentation will use clinical trials data, meta-analyses, and anecdotal evidence from the speaker's years of treating bipolar disorder in a bipolar specialty clinic at Emory University. The treatments discussed will include conventional psychopharmacologic options, such as mood stabilizers, second-generation antipsychotics, and antidepressants. Some attention will be given to novel treatments, including wake-promoting agents and thyroid hormone. Finally, psychosocial treatments including cognitive behavioral therapy and interpersonal and social rhythm therapy will be discussed as well. The factors considered in developing a treatment algorithm/plan for bipolar depression will also be reviewed.

Instructor:
- Jeffrey Rakofsky, M.D., Director, Medical Student Education, Department of Psychiatry and Behavioral Sciences, Emory University. Disclosure: Grant/Research - American Board of Psychiatry and Neurology National Institutes of Mental Health.

Peer-Supported Re-Entry Program for Incarcerated Individuals with Behavioral Health Disorders
Thursday, July 23, 3:00 p.m. to 4:00 p.m. E.T.

The percentage of individuals with mental health, substance use, or co-occurring disorders in prisons is significantly greater than is found in the general public. This results in a continuation of poor outcomes for the individuals and the system. Upon release they frequently lack access to services and are caught up in a cycle of re-incarceration and release. Outcomes that are focused on recovery and breaking this cycle require continuity of quality services in the transition back to the community. In this webinar we will discuss peer led reentry programs that begin within the institutions in release planning and preparation and then bridge the transition back to the community and continue to provide support that helps break the cycle of re-incarceration. We will discuss a highly successful program, R.E.A.L., provided by the Mental Health Association of Nebraska, and examine how peer outreach workers are able to assist individuals in becoming productive members of their communities.

Presenters:
- Patrick Hendry, Mental Health America
- Kasey Moyer, Mental Health Association of Nebraska

New APA On-Line Learning Center

To meet your current and future learning needs, APA is launching a new online Learning Center with enhanced features and key improvements, including:

- A new modern design with simple navigation tools
- A streamlined, efficient checkout process to start learning right away
- Tailored activity recommendations based on your previous courses
- Mobile-responsive interface for on-the-go learning

Your login credentials will remain the same and your course history will be automatically transitioned into the new system. However, activity-level progress within courses cannot be transitioned. As such, we are encouraging Learning Center users to complete any in-progress courses on the current platform by July 20, 2020.

Learn More

Thank you for using the APA Learning Center! If you have questions about this transition, please contact us at LearningCenter@psych.org.
The 2020 Patient Advocacy Summit part of the 8th Annual Patient Congress April 6-7 in Philadelphia is just one month away. The conference’s topic is “Foster an Integrated Approach to Patient Advocacy through Patient Engagement, Public Policy Education, and Stakeholder Collaboration.” This Summit will bring together pharmaceutical manufacturers, patient groups, patient leaders, and policy makers, to discuss ways to tackle the complexities of patient advocacy and the health care market.

Key Themes to be Addressed:
- Patient Advocacy Strategies
- Policy Initiatives and Legislation
- Value Metrics and Measurable Outcomes
- Patient Education and Support Initiatives
- Compliance and Transparency in Advocacy Partnerships
- Social Media and Patient Engagement

Meet Some of the Distinguished Speaker Faculty

Andrea Furia-Helms  
Director, Patient Affairs  
FDA

Scott Williams  
Vice President, Head, Global  
Patient Advocacy and Strategic Partnerships  
EMD SERONO

Sarah Krug  
Chief Executive Officer  
CANCER CARE 101

WHY ATTEND?
- **FIRST-HAND PATIENT INSIGHTS**. Hear directly from patients, caregivers, and advocacy groups to inform advocacy strategies
- **CROSS-STAKEHOLDER INSIGHTS**. C-suite and senior level executives from Payer, Provider, Pharmacy, Pharma, Patient Advocacy Groups, and Patient Leaders share their perspectives on how to improve patient support and raise the voice of patients
**TA Network Opportunities**

**Friday, July 17**
2:00 p.m. to 3:30 p.m. E.T.

**Advancing Behavioral Health Equity: Reflecting on the Past, Learning from the Present and Fostering Connections**

For the final CLC Office Hours and Roundtable, we will be hosting a discussion on advancing behavioral health equity. First, the CLC Team will present preliminary finding from its environmental scan of culturally and linguistically competent practices implemented by children's system of care organizations across the country. Then, we will focus on how these CLC practices can help us move forward as a country to address the disparities that vulnerable populations in our nation face.

Presenters:
- Linda Callejas, Research Assistant Professor, Department of Child & Family Studies, University of South Florida
- Selena Webster-Bass, CEO/Lead Innovators, Voices Institute, LLC
- Catalina Booth, Executive Director, Center for Community Learning, Inc.

**Tuesday, July 21**
2:00 p.m. to 3:30 p.m. E.T.

**Help Me Grow: State Perspectives from Connecticut, New Jersey, and Alabama**

Help Me Grow (HMG) is a system model that utilizes and builds on existing resources in order to develop and enhance a comprehensive approach to early childhood system-building in communities. Successful implementation of HMG requires communities to identify existing resources, think creatively about how to make the most of existing opportunities, and build a coalition to work collaboratively toward a shared agenda. HMG creates partnerships with human service agencies, educators, and health care professionals that strengthen families to give their children the best possible start in life.

Join the National Early Childhood Family Network for this webinar, where we will highlight:
- Updates from the Center for Disease Control “Learn the Signs. Act Early” including materials and new opportunities
- Experiences from three HMG affiliate states, who will share their how they have integrated “Learn the Signs. Act Early.” materials into their Help Me Grow systems

Presenters:
- Luz Rivera, Lead Program Coordinator Connecticut Help Me Grow
- Katie Prince, Help Me Grow Alabama Director
- Deepa Srivinvasavaranadan, State Parent Lead for NJ’s Early Childhood initiatives

**Wednesday, July 22**
2:30 p.m. to 4:00 p.m. E.T.

**Self-Awareness of Leadership Energy in the Time of COVID-19 and Beyond**

This session is part of a three-webinar series offered by the SOC Leadership Learning Community on unique aspects for leadership in this challenging time of the COVID-19 pandemic. Leading during a crisis is challenging work, and self-awareness of the energy needed for effective leadership is essential.

Presenter: Ellen Kagen, Founder and Director, Georgetown Leadership Program, Georgetown University; Founding Partner, Coach Approach Partners; and President, Georgetown Leadership Associates

SAMHSA’s Early Serious Mental Illness Treatment Locator is a confidential and anonymous source of information for persons and their family members who are seeking treatment facilities in the United States or U.S. Territories for a recent onset of serious mental illnesses such as psychosis, schizophrenia, bi-polar disorder, or other conditions. These evidence-based programs provide medication therapy, family and peer support, assistance with education and employment and other services.

Individuals who experience a first onset of serious mental illness - which can include a first episode of psychosis - may experience symptoms that include problems in perception (such as seeing, hearing, smelling, tasting or feeling something that is not real), thinking (such as believing in something that is not real even when presented with facts), mood, and social functioning. There are effective treatments available and the earlier that an individual receives treatment, the greater likelihood that these treatments can lead to better outcomes and enable people to live full and productive lives with their family and friends.

SAMHSA has integrated data on first episode psychosis programs that was provided by NASMHPD and the NASMHPD Research Institute (NRI) into its existing treatment locator. Users receive information on Coordinated Specialty Care and other first episode psychosis programs operating in their state. This tool is designed to help quickly connect individuals with effective care in order to reduce the risk of disability.

You Can Access the SMI Treatment Locator HERE

Social Marketing Assistance Available

Social marketing resources for system of care communities were developed by the SAMHSA-funded Caring for Every Child’s Mental Health Campaign team, which was a collaboration between NASMHPD, Vanguard Communications (link is external), Youth MOVE National (link is external), and the Federation of Families for Children’s Mental Health (link is external). The Campaign was funded through Fiscal Year 2018. Below are a sampling of commonly-requested social marketing resources developed by the Campaign.

System of Care Cooperative Agreements that are currently funded by SAMHSA should seek social marketing technical assistance through the University of Maryland’s TA Network.

Other organizations or entities seeking social marketing technical assistance, including State Behavioral Health Agencies, are welcome to contact NASMHPD. Additional social marketing instructional materials, training, and consultation may be available. If you’d like to discuss your needs and/or have questions about how we can help, please contact Leah Holmes-Bonilla. If you would like to submit a request for social marketing technical assistance or training from NASMHPD, please fill out this application form.
